Agenda – Improving India’s Covid19 Vaccination Drive with Special Emphasis on Children and Tribal Communities

Vaccines are a boon for humanity. They have saved countless lives over the centuries. In the current Coronavirus situation, they are helping doctors in saving lives. The vaccination of adults is going on and now, we have to think about children and tribes. 41% of the Indian population is under the age of 18. Testing of vaccines for them has just started so the government must expedite this process. Many tribes are orthodox so first the government will have to convince them about vaccination. Also, they live in remote parts of the country so getting the vaccines to them will be a challenge as well.

MINISTRY- MATRIX
